

Please expose us your vision of human space flight and related exploration possibilities after ISS within one page.

"January 25th 2017, Barcelona, Spain, fifteen hundred hours CET, entry 001. My name is Marc Rovira and I am writing this 1 page essay to explain my vision of human Space flight and related exploration possibilities after ISS. I honestly feel like I am a lonely space traveler with my space vehicle voyaging through Space, and I am speaking to the recording machine, and that this recording will be listened to in hundreds of years from now, and people will have a glimpse of what life was like, and want dreams we had.

This is exactly where I think human Space flight is going after the ISS. We are moving close together as a race, but further from Earth. We have just seen a glimpse of space and we are very excited to go there. And putting aside all the technical problems and difficulties we as a race are going to face, going to the moon was the spark, creating the ISS was the first solid step and now we have to make the second one, solid and forward.

I honestly believe that the next step is to use Space to help Earth. She deserves it, we owe her and we must. Use satellites, technology, discoveries, etc to aid this planet, make it better and improve the lives of all the inhabitants. It is our duty.

Then, after this step is done, or once this step is consolidated, we can start thinking (and we should start thinking) about using Space flight to expand, explore and learn. Creating an ISS 2.0 in a different location, further away, Mars maybe, is a very plausible next step, were we can push the boundaries of our knowledge, generate more questions and become wiser and more humble.

The future and my vision of human Space flight and related exploration activities lies not outside Earth in Space, but within us. We must start ambitious and with grandiose goals. We have achieve so much with so little, that I am truly hopeful of what we can achieve together and in unison.

Entry diary 001. Marc Rovira.
